# Assignment #2: Collaborative Single Page App
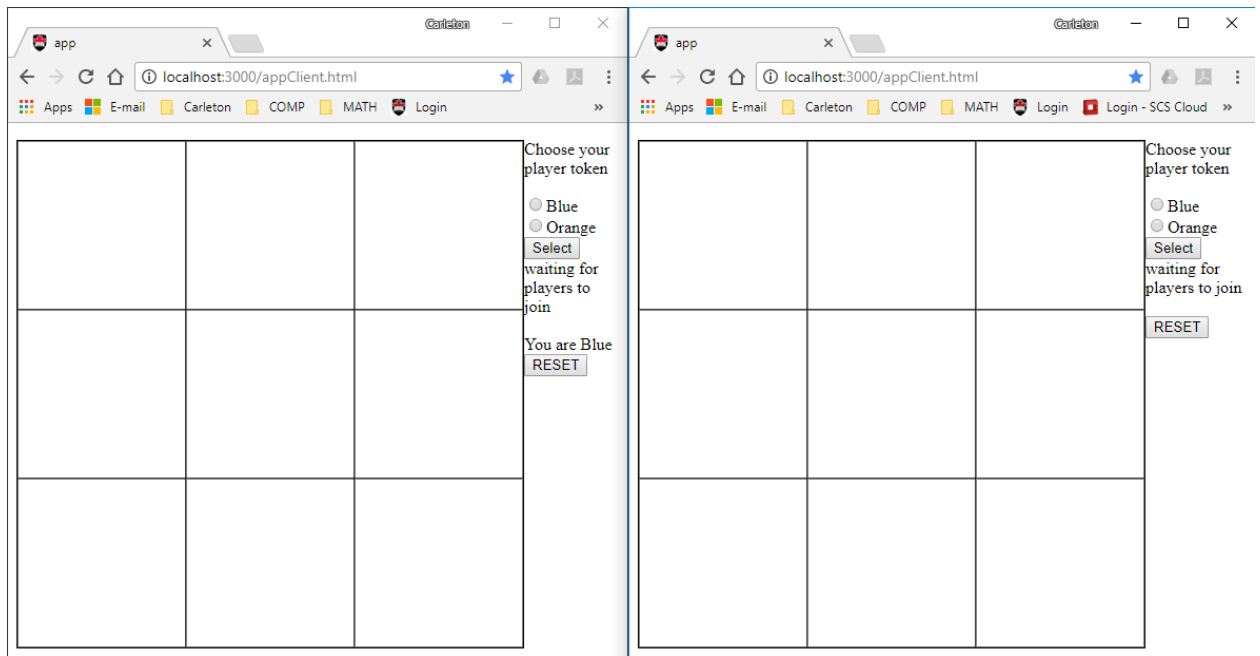

By Ryan Kane and Jackson Moore

Our app is intended as a way for two people to play the game tic-tac-toe. First each user chooses their colour, either blue or orange. Second once both players have selected their colour the person who chose their colour first makes the first move. Each player gets to choose a tile for their turn until someone wins, or there is a draw. Once the game has ended a moving message will bounce around the field displaying who has won. Either user at this point can choose to stop playing or reset the board by hitting the reset button.

To launch the app, first in the cmd enter node app.js when in our folder. Next in your browser go to http://localhost:3000/appClient.html on 2 separate tabs. Then choose a colour on each tab and it will direct you to who's turn it is and then click a tile.

This is when you first get on.
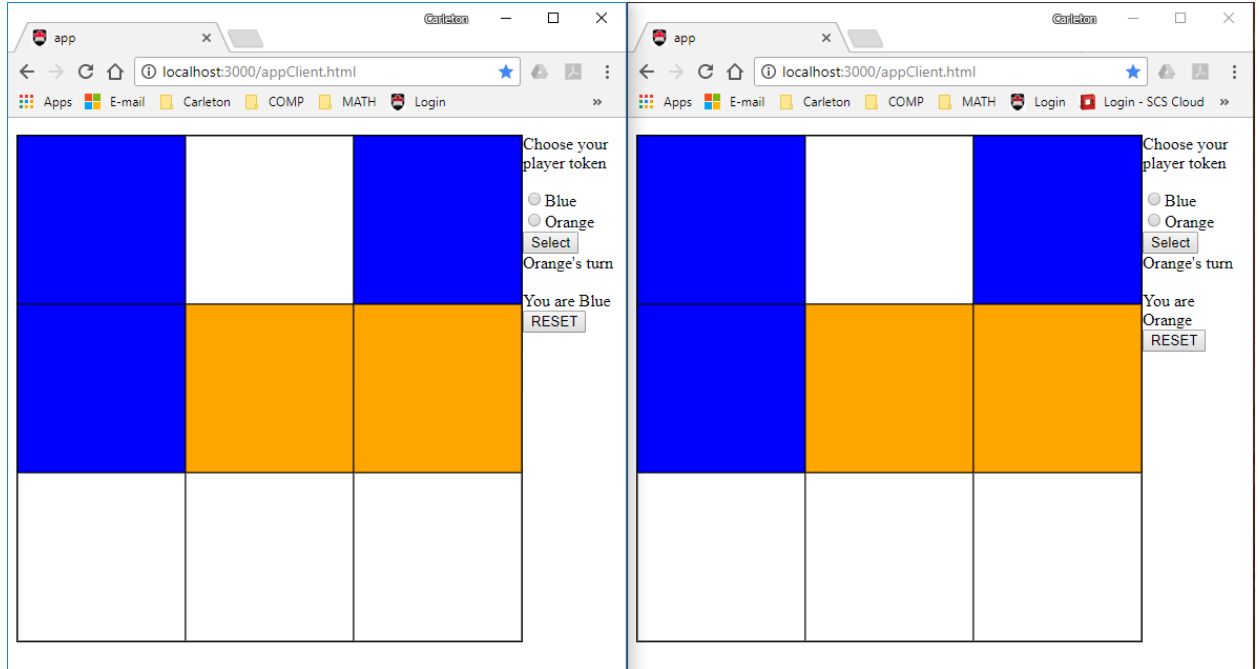

When only one user has chosen a colour

Left browser:
Choose your player token
- Blue
- Orange
Select
waiting for players to join

You are Blue
RESET

Right browser:
Choose your player token
- Blue
- Orange
Select
waiting for players to join

RESET

Mid game

Left browser:
Choose your player token
- Blue
- Orange
Select
Orange's turn

You are Blue
RESET

Right browser:
Choose your player token
- Blue
- Orange
Select
Orange's turn

You are Orange
RESET

And when someone wins
